Chapter 13 Probability

Jay Vikrant EE22BTECH11025

Q10.13.3.38: In a game, the entry fee is Rs 5.The game consists of a tossing a coin 3 times. If one or two heads show, Sweta gets her entry fee back. If she throws 3 heads, she receives double the entry fees. Otherwise she will lose. For tossing a coin three times, find the probability that she

- 1) loses the entry fee.
- 2) gets double entry fee.
- 3) just gets her entry fee.

Solution: Let, X_i and Y_i be the sequence of independent Bernoulli random variables and the total number of trials be n and Z be the random variable that represents the number of tails in n trials which is given by:

$$p_X(k) = {}^{n}C_k p^{n-k} q^k, k \in \{0, 1, 2\}$$
 (1)

Random variable	denoted	Events
X	0	loses the entry fees
	1	gets double the entry fees
	2	just gets the entry fees

TABLE 3
RANDOM VARIABLES

Probability that she loses the entry fees,

$$\Pr(X=1) = {}^{3}C_{3} \left(\frac{1}{2}\right)^{3-3} \left(\frac{1}{2}\right)^{3} \tag{2}$$

$$= \left(\frac{1}{2}\right)^3 \tag{3}$$

$$=0.125$$
 (4)

Probability that she gets double entry fees,

$$\Pr(X=1) = {}^{3}C_{3} \left(\frac{1}{2}\right)^{3-3} \left(\frac{1}{2}\right)^{3} \tag{5}$$

$$= \left(\frac{1}{2}\right)^3 \tag{6}$$

$$=0.125$$
 (7)

Probability that she just gets the entry fees,

$$Pr(X = 2) = 1 - Pr(()X = 0) - Pr(()X = 1)$$
 (8)

$$= 1 - 0.125 - 0.125 \tag{9}$$

$$= 0.750$$
 (10)
